

# DON'T DRAIN FAT!

Throw away your fats, oils and greases

Cook

Cool

Chuck

In the bin!

Tipping cooking fats, gravy and other leftovers down the drain can cause mayhem in our drains and sewers. Pouring boiling water down the drain does not work. Save yourself a potential problem and allow your fats to cool before throwing them away

Incorrect waste can attach to fatty build-ups in our pipes, causing blockages

Clearing blockages cost water companies around £100 million a year, adding costs onto bills

The build-up of fat, oil and grease can cause sewer flooding and pollution of rivers and streams
